

Market analysis report published on May, 2013

Optical disc archive 2013

As to optical disc in the high-definition (HD) broadcasting era, the spread of HDTV is going on mainly in developed countries, the shift toward HD-capable media such as Blu-ray disc (BD) has already begun. Despite the fact that DVD-Video, as one of the package media, passed peak due to the influence of network download, DVD for recording such as DVD-R continues to grow likely achieving 10 billion units of annual sales. Although CD-R is on the decline, there is demand for 10 billion units DVD. In addition, the growth of BD software and recording BD is in the future.

As the application of media increasingly diversifies in recent years, appropriate electronic media such as HDD and flash memory are growing. The storage industry is the phase of "Neo-Symphonious Paradigm", a variety of storage is harmoniously used.

Optical Disc Archive 2013

INDEX

1. Background of this report	10
2. Important view points of optical disc archive.....	11
3. Trend of archive storage	13
3.1. Increasing of global archive capacity and Megatrend	13
3.2. Global macro event and the time difference of the feeling.....	14
3.3. Insufficient supply of HDD to archive capacity increase.....	15
3.4. Why was in decline trend optical disc system for enterprise use?.....	16
3.5. Recognition and dissatisfaction to the optical disc storage of the storage vendor	18
4. The positioning of the archive in the IT system and change of the way	20
4.1. The difference between backup and archive.....	20
4.2. A meaning and significance of the archive	21
4.3. A motivation of the archive.....	22
4.4. Example of a dedicated archive storage so far	25
4.5. A position of the archive and the changes.....	26
4.6. Stratification of archive data and its impact for storage selection.....	28
4.7. Various proposal for archive storage system.....	29
5. Demand characteristics of the archive system.....	31

5.1.	The pattern of hierarchical storage and the features.....	31
5.2.	Demand characteristics of the archive system.....	34
5.2.1.	Storage comparison corresponding to the required characteristics of IT systems side.....	34
5.2.2.	Important aspect of the archive	35
5.2.3.	TCO in long-term storage.....	36
5.2.4.	Accesibility and cost	37
5.2.5.	Trigger factors of the lower tier storage.....	38
5.3.	Relation between the size of establishment and the archive system.....	39
5.3.1.	Relation between the size of establishment and the archive system	39
5.3.2.	Merit of optical archive system and the difference of recognition by the organization hierarchy.....	41
6.	Future technology trend of the several storage	43
6.1.1.	Recording density improving technology and the trend of density	43
6.1.2.	Technology revolution of HDD storage.....	44
6.1.3.	LTO roadmap and backward compatibility	45
7.	Kinds and characteristics of high capacity optical disc storage of the future	46
7.1.	Comparison of the charateristic of each high capacity optical storage system	47
7.2.	Technology trend of haghcapacity optical storage	47
7.2.1.	Holographic recording technology.....	48

7.2.1.1. 3D digitalvector wave holographic memory for tera-byte eraby polymer (Utsunomiya univ、AIST、Tokyo unic、Nippon steel and Sumitomo metal corporation)	49
7.2.1.2. Holographic recording (Hitachi)	51
7.2.2. BD format base Multi-layered technology	53
7.2.2.1. BD16-layer 500GB write once disc and drive (Pioneer、TDK)	53
7.2.2.2. Two-photon absorption recording material (Fuji Film)	55
7.2.3. Challenges of large-scale optical disc roadmap	57
7.3. The representative optical disc archive system of the companies and the way of thinking.....	59
7.3.1. PANASONIC	59
7.3.2. SONY	60
7.3.3. Toshiba.....	61
7.3.4. NETZON	62
7.3.5. ASACA.....	63
7.3.6. Optical Vault / HLDS	64
7.3.7. Primera/RIMAGE/EPSON	65
7.4. Archive solution software	66
7.5. Archive management softwares and the feature.....	67

7.5.1. Point Archiver (PoINT Software & Systems GmbH, distributor of Japan is Optical expert)	67
7.5.2. AutoCOLD 「GUNKOKU」.....	68
7.5.3. Symantic Enterprise Vault	69
7.5.4. CommVault SIMPANA.....	71
7.6. Possibility and roadmap of high capacity optical disc	72
8. Archive circumstances of the world.....	75
8.1. Current situation overview of archive in the U.S.	75
8.1.1. Film archive	75
8.1.2. Government archive	76
8.1.2.1. Digital archive centering on Library of Congress	76
8.1.2.2. NARA	77
8.1.3. Enterprise archive.....	78
8.2. China.....	79
8.2.1. The state archives of China (档案馆)	80
8.2.2. National Library of China	81
8.3. Korea.....	84
8.3.1. Legal system about archive.....	84
8.3.2. Promotion system of digital archive and National Archives of Korea.....	85

8.3.3.	Dibrary (National Digital Library Korea).....	86
8.4.	Current situation overview of archive in Europe.....	87
8.4.1.	Digital archive in the U.K.	88
8.4.2.	Ditigal archive in France	90
8.4.3.	Europeana	93
8.5.	Japan.....	93
8.5.1.	National Diet Library	93
8.5.2.	National Archives of Japan	95
9.	Possibility of optical disc archive	97
9.1.	Challenges optical disc archive to solve.....	97
9.2.	Configuration example of a hierarchical archive system.....	98
9.3.	High capacity optical disc and the future of optical disc archive	100
9.3.1.	Optical disc archive bussiness scale.....	100
9.3.2.	Expansion inevitability of optical disk archive system.....	101
10.	Summary.....	102
Figures		
FIG 1	important view point of optical disc archive.....	12
FIG 2	Enterprise archive data trend (EB).....	13
FIG 3	Global enterprise storage capacity and HDD capacity supply.....	15

FIG 4	Optical disc archive market trend.....	16
FIG 5	The headwind for the optical disc archive	17
FIG 6	Negative reason of optical disc S/lers see	19
FIG 7	The difference between backup and archive	20
FIG 8	A motivation of the archive	22
FIG 9	Archive solutions.....	23
FIG 10	Archive data to be increased step (general company)	24
FIG 11	Example of market of optical disc archive storage it's niche but not small...	25
FIG 12	Data scale and the archive system	28
FIG 13	Relationship between data size and archive system	29
FIG 14	Archive storage comparison.....	30
FIG 15	Backup and archive system on hierarchical storage.....	31
FIG 16	Hierarchical Archive system (problems of HDD archive system)	33
FIG 17	RO-ILM model	34
FIG 18	Optimization elements of the archive system.....	35
FIG 19	Important aspect of the archive	36
FIG 20	Comparison of power consumption and TCO in each storage	37
FIG 21	Classification by accessibility	38

FIG 22	Trigger factors of lower tier storage.....	39
FIG 23	Relation between the data size and number of facilities.....	40
FIG 24	Relation between the size of establishment and archive system	41
FIG 25	Merit of optical archive system and the difference of recognition by the organization hierarchy.....	42
FIG 26	Evolution of the recording density of several storage	43
FIG 27	New technologies for increasing of HDD capacity	44
FIG 28	LTO roadmap	45
FIG 29	A typical example of a broadly divided aim of next-generation high-capacity disk	48
FIG 30	Polarization and angle multiple recording	49
FIG 31	Polarization and multi-value technologies.....	50
FIG 32	Coaxial (co-linear) holography longitudinal signal method	50
FIG 33	RLL coding	52
FIG 34	What's separated guide layer disc	53
FIG 35	16 layers BD-Write Once Optical system	54
FIG 36	Comparison of single-photon absorption and two-photon absorption	55
FIG 37	Method to make recording bump.....	56
FIG 38	Manufacturing process for multi-layer	57

FIG 39	Capacity migration trend of FujiFilm two-photon absorption material disc.....	58
FIG 40	PANASONIC Blu-ray data archiver system.....	59
